

Professional summary

Computer science undergraduate with hands-on experience in full-stack development and algorithms. Proficient in Java and JavaScript, with hands-on experience building responsive web applications, implementing authentication systems, and integrating databases and APIs. Passionate about developing scalable systems and real-time simulations, with a strong interest in performance optimization and clean architecture. Seeking an internship to apply technical expertise, problem-solving skills, and collaborative development experience in web technologies and game development.

Education

Bachelor of Science in Computer Science, The University of Texas at Dallas, Richardson, TXMay 2027

UTD Dean's List by Spring 2024 | GPA : 3.688 | Relevant courses: Data Structure, Advanced Algorithm Design, Paradigms

Projects

Custom Browser Navigation Engine—JavaSeptember 2025

- Engineered custom stack and queue for browser navigation, using linked list and dynamic array to maximize memory control.
 - Developed website features—navigating back/forward, viewing/clearing history, and restoring sessions using file serialization.
 - Applied a custom iterator to walk through stack elements and support saving and reloading browsing state across sessions.
- <https://github.com/tule1205/Web-Browser-Navigation-System.git>

AI Chatbot Web Platform—HTML, JavaScript, FirebaseAugust 2025 - December 2025

- Built a responsive web application featuring an AI chatbot that answers user questions about the Nintendo Switch 2.
 - Optimized frontend performance and state management, resulting in smooth, cross-device user interactions.
 - Implemented an authentication system, including sign-up, sign-in, sign-out, password reset, and account management functions.
 - Integrated Firebase to secure user data storage and real-time communication between the frontend and the backend server.
- <https://github.com/22Ujjwal/Chill-kill-CS3354.git>

Full-Stack Finance Tracker—HTML, JavaScript, SQLite, Gemini LLMDecember 2025 - March 2026

- Built a full-stack personal finance website for users to efficiently record, manage, and analyze their expenses and finances.
 - Implemented an AI assistant helping users to easily keep track of their records and status and answer any related questions.
 - Designed and implemented a robust backend system with four core RESTful APIs to manage user transaction data efficiently.
 - Utilized SQLite for persistent data storage, enabling automated monthly summaries and category-based spending insights.
- <https://github.com/tule1205/Personal-Finance-Tracker.git>

Task Orbit—HTML, JavaScript, SupabaseMarch 2026

- Built a desktop-first Kanban task manager for streamlined workflow across To Do, In Progress, In Review, and Done stages.
 - Integrated Supabase (Postgres, Auth, Storage) to manage tasks, sub-tasks, file attachments, chat threads, and activity logs.
 - Implemented Supabase anonymous authentication with row-level security-aware data access, plus task metadata.
 - Engineered dynamic drag-and-drop UI components and responsive layouts using vanilla JavaScript to maintain a lightweight architecture and minimize framework overhead.
- <https://github.com/tule1205/Task-Orbit.git>

Skills & Interests

Languages: C++, Java, JavaScript, SQL, HTML, CSS

Web Frameworks/Libraries: React Native, Node.js

Databases & Backend: SQLite, Firebase, Supabase, RESTful APIs

Tools & Platforms: VS Code, Cursor, Git, GitHub, Linux, IntelliJ IDEA, Figma, GeminiLLM

Interests: Frontend Development, Website & App Development, Game Development

Organization

SASE UT Dallas—Society of Asian Scientists and Engineers—Event OfficerSeptember 2025

- Executed event planning and documentation for seamless event delivery.
- Coordinated logistics and budgeting in collaboration with marketing and finance teams.

Competitions

Hackathon - FinHack Fifth AnnualApril 2026

Hackathon - WEhack “The Night At The Museum”April 2026
