Professional summary

CS undergraduate skilled in JavaScript and Node.js development in building responsive UIs, API integration, and system scalability. Passionate about implementing scalable, optimized web/app applications and seeking an internship in web technologies and game development to leverage hands-on expertise in software architecture and algorithm design.

Education

Bachelor of Science in Computer Science, The University of Texas at Dallas, *Richardson, TX* May 2027
UTD Dean’s List by Spring 2024 | GPA : 3.688 | Relevant courses: Data Structure, Advanced Algorithm Design, Paradigms

Experiences

FPT Software Ho Chi Minh City, Vietnam
Frontend Intern—*Angular, TypeScript* June 2026 - August 2026

- Maintained the UI to streamline complex medical workflows for a Japanese company’s large-scale healthcare management system.
- Optimized the rendering of DICOM photos within the web application, improving load times and visual clarity for medical professionals.
- Conducted software updates and bug fixes for the frontend codebase, reducing user-reported UI glitches and improving overall system.

Projects

Custom Browser Navigation Engine—Java September 2025

- Built a navigation engine using custom stack and queue, cutting per-entry memory **28%** over standard libraries on a **10K-URL** benchmark.
- Performed session persistence via Java serialization and a custom binary format, restoring **10K-entry** histories in **~210 ms** on cold start.
- Engineered a custom navigation stack Iterator for encapsulated traversal, enabling deterministic save/restore validated by **40+** JUnit tests.

→ <https://github.com/tule1205/Web-Browser-Navigation-System.git>

Full-Stack Finance Tracker—HTML, JavaScript, SQLite December 2025 - March 2026

- Architected an expense-tracking web app for managing budgets, serving indexed SQLite queries at **<50 ms** p95 on a **10K-row** dataset.
- Designed an LLM-backed assistant translating natural-language queries into parameterized SQL, returning answers in **~1.2s** end-to-end.
- Implemented a monthly category-classification auto-tagging **~95%** of monthly transactions, flagging the rest for one-click correction.

→ <https://github.com/tule1205/Personal-Finance-Tracker.git>

Task Orbit—HTML, JavaScript, Supabase, PostgreSQL March 2026 - May 2026

- Engineered a drag-and-drop desktop Kanban app, leveraging optimistic UI to maintain **~16 ms** interaction latency across **200-card** boards.
- Integrated Supabase Realtime to sync task, attachment, and chat updates across clients with **~250 ms** median end-to-end propagation.
- Modeled PostgreSQL schemas with row-level security policies to enforce strict access control, ensuring users only view permitted boards.

Skills & Interests

Languages: C++, Java, JavaScript, TypeScript, PostgreSQL, HTML, CSS
Web Frameworks/Libraries: React Native, Node.js, Angular
Databases & Backend: SQLite, Firebase, Supabase, RESTful APIs
Tools & Platforms: VS Code, Cursor, Git, GitHub, Linux, IntelliJ IDEA, Figma, Pencil
Interests: UI, Frontend, Website & App, Game Development

Organization/Leadership

SASE UT Dallas—Society of Asian Scientists and Engineers—Event Officer September 2025

Competitions

Hackathon - FinHack Fifth Annual April 2026
Hackathon - WEhack “The Night At The Museum” April 2026
